IPC-S-816

SMT Process Guideline and Checklist

IPC-S-816
A standard developed by IPC

Original Publication
July 1993
# Table of Contents

1.0 **SCOPE** .................................................. 1

1.1 Environmental, Safety, and Industrial Hygiene Considerations ............ 1

1.2 Applicable Documents ....................................... 1

2.0 **HANDLING** ............................................. 1

2.1 Electrostatic Discharge (ESD) Concerns ................................ 1

2.2 Component Leads ............................................ 1

2.3 Storage ....................................................... 1

2.4 Interim Handling ............................................ 2

3.0 **INCOMING INSPECTION OF MATERIALS AND COMPONENTS** .......... 2

4.0 **ADHESIVE APPLICATION** .................................. 2

4.1 Dispensing .................................................. 2

5.0 **SOLDER PASTE APPLICATION** ................................ 4

5.1 Stencil Printing ............................................. 5

5.2 Screen Printing ............................................. 12

5.3 Syringe Dispensing ........................................... 14

6.0 **COMPONENT PLACEMENT** ................................ 16

6.1 Observed Condition: Wrong Component Orientation ....................... 16

6.2 Observed Condition: Wrong component placed on board ................ 16

6.3 Observed Condition: Missing Component .................................. 16

6.4 Observed Condition: Component Misalignment ............................. 17

6.5 Observed Condition: Damaged Component .................................. 17

7.0 **INFRARED/CONVECTION REFLOW SOLDERING** .................. 17

7.1 Observed Condition: No Reflow ................................ 18

7.2 Observed Condition: Solder Balls ................................ 19

7.3 Observed Condition: Charring of Board/Components ...................... 19

7.4 Observed Condition: Damaged Components ................................ 20

7.5 Observed Condition: Cracked Joints ................................ 20

7.6 Observed Condition: Insufficient Solder ................................ 20

7.7 Observed Condition: Bridging .................................. 20

7.8 Observed Condition: Voids ..................................... 20

7.9 Observed Condition: Opens ..................................... 21

7.10 Observed Condition: Spatter .................................... 21

7.11 Observed Condition: Component Alignment ............................. 21

7.12 Observed Condition: Delamination .................................. 21

7.13 Observed Condition: Warp ..................................... 21

7.14 Observed Condition: Disturbed Joints ................................ 21

7.15 Observed Condition: Dewetting ................................... 21

8.0 **VAPOR PHASE REFLOW SOLDERING** ......................... 21

8.1 General .................................................................. 22

8.2 Problems .......................................................... 22

9.0 **WAVE SOLDERING** .......................................... 24

9.1 Observed Condition: Solder Skips .................................. 24

9.2 Observed Condition: Solder Bridges .................................. 25

9.3 Observed Condition: Unfilled Via Holes ................................. 26

9.4 Observed Condition: Solder Wave Overflowing Board .................. 26

9.5 Observed Condition: Grainy or Disturbed Joints ......................... 26

9.6 Observed Condition: Cold Joints .................................. 27

9.7 Observed Condition: Solder Balls on Assembly ......................... 27

9.8 Observed Condition: Cracked Chip Components or Plastic-Bodied Leaded Components ...................................................... 27

10.0 **CLEANING** .................................................. 27

10.1 Observed Condition: Visible Residue ................................ 27

10.2 Observed Condition: Failure of Conformal Coating ..................... 28

11.0 **REPAIR/REWORK** .......................................... 28

11.1 Scope .................................................................... 28

11.2 General .............................................................. 28

11.3 Goals and Guidelines ............................................ 29

11.4 Primary Heating Methods ........................................ 29

11.5 Preheating and Auxiliary Heating ..................................... 30

11.6 Vision Systems and Component Placement .............................. 30

11.7 Selecting Optimum Method of Rework/Repair ........................... 31

11.8 Troubleshooting .................................................. 31

11.9 Observed Condition: Insufficient solder reflow to affect SMD removal ................................................................. 31

11.10 Observed Condition: Component not removable after solder reflow or lifted lands upon attempted removal .................. 31

11.11 Observed Condition: Lands being lifted or damaged during removal of old solder .................................................. 31

11.12 Observed Condition: Insufficient or poor adhesion of solder on lands during pretinning operation .............................. 32
11.13 Observed Condition: Misalignment of component to land pattern during SMD installation........................................................ 32

11.14 Observed Condition: Dispersion or solderballing of solder paste during reflow.... 32

11.15 Observed Condition: Blistering or measling of substrate, or lifted lands during SMD installation or removal .......................... 32
SMT Process Guideline and Checklist

1.0 SCOPE
This document is intended to provide guidelines and assistance in performing and troubleshooting the steps involved in the process of producing printed wiring assemblies incorporating surface mounting attachment of components.

Each section contains a list of problems often observed during a specific part of the surface mount assembly process. The list of observed symptoms is matched by a description of causes often associated with the symptoms. Suggestions for correction are also included. These solutions may be related to the equipment, materials, or design. Accordingly, some of these corrective measures cannot be implemented on the shop floor.

1.1 Environmental, Safety, and Industrial Hygiene Considerations
The use of some of the materials referenced in this document may be hazardous. Precautions should be taken to safeguard personnel and the environment, as outlined in the appropriate data supplied with the materials used. In addition, equipment and procedures should adhere to applicable local and federal regulations.

1.2 Applicable Documents
The following documents, of the issue currently in effect, are applicable to the extent specified herein.

1.2.1 IPC
IPC-CH-65 Guidelines for Cleaning of Printed Boards and Assemblies
IPC-OI-645 Standard for Visual Optical Inspection Aids
IPC-R-700 Suggested Guidelines for Modification, Rework, and Repair of Printed Boards and Assemblies
IPC-SM-782 Surface Mount Land Patterns (configurations and Design Rules)
IPC-SM-786 Recommended Procedures for handling of Moisture Sensitive Plastic IC Packages
IPC-SM-840 Qualification and Performance of Permanent Polymer Coating (Solder Mask) For Printed Boards

1.2.2 Joint Industry Standards
J-STD-002 Solderability Test for Component Leads, Termination, Lugs, Terminals and Wires
J-STD-003 Solderability Tests for Printed Boards

J-STD-004 Requirements for Soldering Fluxes
J-STD-005 General Requirements and Test Methods for Electronic Grade Solder Paste

2.0 HANDLING
Handling is one topic that is not confined to a specific area of the manufacturing operation. Handling problems are a “cradle to grave” issue for which no one will claim responsibility; yet the impact on the surface mount process yield is substantial. Every major step covered in this guideline, from adhesive application to cleaning of surface mount assemblies, relies on a comprehensive component and assembly handling strategy. Handling can’t be the concern of a single group in the manufacturing environment and must be an integral part of each process step in the surface mount assembly line. Although the general format of this document is problem-cause-corrective action, the following handling items need to be considered throughout the entire surface mount assembly process.

2.1 Electrostatic Discharge (ESD) Concerns
The following are ESD concerns:
1) Has process machinery been properly grounded?
2) Have work stations and storage areas been properly grounded?
3) Are other environmental controls (i.e., ionizers, humidifiers, etc.) in place to reduce the occurrence of ESD?
4) Have operators and all other employees who may handle components or surface mount assemblies been properly trained to use ESD precautions such as wrist straps or other similar preventative measures?
5) Have the component packaging and assembly containers been reviewed for potential ESD problems?
6) Have ESD sensitive parts been identified and sufficiently protected?

2.2 Component Leads
The following are concerns regarding component leads:
1) Has component lead coplanarity been addressed following manual or automatic lead forming operations?
2) Has component lead solderability concerns in relation to handling been reviewed and precautions taken where deemed necessary?

2.3 Storage
The following are concerns regarding storage:

1. IPC, 2215 Sanders Road, Northbrook, IL 60062
